Influenza A H2N2 (A/Canada/720/2005)
Hemagglutinin / HA Protein (His Tag)

Catalog Number: 11688-V08H

General Information

Gene Name Synonym:
HA

Protein Construction:
A DNA sequence encoding the extracellular domain (Met 1-Gln 516) of the influenza hemagglutinin (A/Canada/720/2005 (H2N2)) (AY28987.1) (HA1+HA2, uncleaved) was fused with a C-terminal polyhistidine tag.

Source: H2N2

Expression Host: HEK293 Cells

QC Testing

Purity: > 95 % as determined by SDS-PAGE

Endotoxin:
< 1.0 EU per μg of the protein as determined by the LAL method

Stability:
Samples are stable for up to twelve months from date of receipt at -70 °C

Predicted N terminal: Asp 16

Molecular Mass:
The secreted recombinant influenza A H2N2 HA (A/Canada/720/2005 (H2N2)) comprises 521 amino acids and has a predicted molecular mass of 59 kDa. As a result of glycosylation, it migrates as an approximately 60-70 kDa band in SDS-PAGE under reducing conditions.

Formulation:
Lyophilized from sterile PBS, pH 7.4

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization. Specific concentrations are included in the hardcopy of COA. Please contact us for any concerns or special requirements.

Usage Guide

Storage:
Store it under sterile conditions at -20°C to -80°C upon receiving. Recommend to aliquot the protein into smaller quantities for optimal storage.

Avoid repeated freeze-thaw cycles.

Reconstitution:
Detailed reconstitution instructions are sent along with the products.
