Mouse IFNA4 / IFNα4 / Interferon alpha-4 Protein (His Tag)

Catalog Number: 50672-M08H

General Information

Gene Name Synonym:
Ifa4; MGC143607; RP23-139P14.30-001

Protein Construction:
A DNA sequence encoding the mouse IFNA4 (NP_034634.1) (Met1-Glu186) was expressed with a C-terminal polyhistidine tag.

Source:
Mouse

Expression Host:
HEK293 Cells

QC Testing

Purity:
> 95 % as determined by SDS-PAGE

Bio Activity:
Measured in antiviral assay using L929 cells infected with vesicular stomatitis virus (VSV). The ED₅₀ for this effect is typically 2-12 pg/mL.

Endotoxin:
< 1.0 EU per µg of the protein as determined by the LAL method

Stability:
Samples are stable for up to twelve months from date of receipt at -70 °C

Predicted N terminal:
Cys 25

Molecular Mass:
The recombinant mouse IFNA4 comprises 173 amino acids and has a predicted molecular mass of 20.2 kDa. The apparent molecular mass of the protein is approximately 22-27 kDa in SDS-PAGE under reducing conditions.

Formulation:
Lyophilized from sterile PBS, pH 7.4.

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization. Specific concentrations are included in the hardcopy of COA. Please contact us for any concerns or special requirements.

Usage Guide

Storage:
Store it under sterile conditions at -20°C to -80°C upon receiving. Recommend to aliquot the protein into smaller quantities for optimal storage.

Avoid repeated freeze-thaw cycles.

Reconstitution:
Detailed reconstitution instructions are sent along with the products.

SDS-PAGE:

Protein Description

Interferon, alpha 4 (IFNA4) belongs to the alpha/beta interferon family. Two variants of IFNA4 (IFNA4a and IFNA4b) are known, which differ from each other by changes in their coding regions at nucleotide positions 220 and 410 and can be distinguished by selective restriction enzyme analysis.

Interferons are produced by macrophages, IFN-alpha have antiviral activities. Interferon stimulates the production of two enzymes: a protein kinase and an oligoadenylate synthetase. IFN-alpha, the first cytokine to be produced by recombinant DNA technology, has emerged as an important regulator of growth and differentiation, affecting cellular communication and signal transduction pathways as well as immunological control. Originally discovered as an antiviral substance, the efficacy of IFN-alpha in malignant, viral, immunological, angiogenic, inflammatory, and fibrotic diseases suggests a spectrum of interrelated pathophysiolgies. IFN-alpha emerged as a prototypic tumor suppressor protein that represses the clinical tumorigenic phenotype in some malignancies capable of differentiation.
