Canine CX3CL1 ORF mammalian expression plasmid, C-Flag tag

Catalog Number: DG70071-CF

General Information
Gene: chemokine (C-X3-C motif) ligand 1
Official Symbol: CX3CL1
Synonym: CX3CL1
Source: Canine
cDNA Size: 1314bp
RefSeq: AB648939.1

Description
Lot: Please refer to the label on the tube
Vector: pCMV3-C-FLAG
Shipping carrier: Each tube contains approximately 10 μg of lyophilized plasmid.

Storage:
The lyophilized plasmid can be stored at ambient temperature for three months.

Quality control:
The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

Sequencing primer list:
pCMV3-F: 5' CAGGTGTCCACTCCAGGTCCAAG 3'
pDNA3-R: 5' GGCAACTAGAAGGCACAGTCGAGG 3'
Or
Forward T7: 5' TAATACGACTCACTATAGGG 3'
ReverseBGH: 5' TAGAAGGCACAGTCGAGG 3'

The plasmid is ready for:
• Restriction enzyme digestion
• PCR amplification
• E. coli transformation
• DNA sequencing

E. coli strains for transformation (recommended but not limited)
Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5α and TOP10F′.
Vector Information

All of the pCMV vectors are designed for high-level stable and transient expression in mammalian hosts. High-level stable and non-replicative transient expression can be carried out in most mammalian cells. The vectors contain the following elements:

• Human enhanced cytomegalovirus immediate-early (CMV) promoter for high-level expression in a wide range of mammalian cells.
• Hygromycin resistance gene for selection of mammalian cell lines.
• A Kozak consensus sequence to enhance mammalian expression.
