Canine IL11RA Gene cDNA clone plasmid

Catalog Number: DG70078-G

General Information

Gene: interleukin 11 receptor, alpha
Official Symbol: IL11RA
Synonym: IL11RA
Source: Canine
cDNA Size: 1173bp
RefSeq: XM_005626742.1
Plasmid: pGEM-dIL11RA

Description

Lot: Please refer to the label on the tube
Sequence Description:

Identical with the Gene Bank Ref. ID sequence except for the point mutation 413 G/A and 416 G/A resulting in the amino acid Ser substitution by Asn, Gly substitution by Asp.

Vector:
pGEM-T

Shipping carrier:
Each tube contains approximately 10 μg of lyophilized plasmid.

Storage:
The lyophilized plasmid can be stored at ambient temperature for three months.

Quality control:
The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

Sequencing primer list:

M13-47: 5' GCCAGGGTTTCCCCAGTCGAC 3'
RV-M: 5' GAGCAGGATAAATTCACACAGG 3'

Other M13 primers can also be used as sequencing primers.

Plasmid Resuspension protocol

1. Centrifuge at 5,000 × g for 5 min.
2. Carefully open the tube and add 100 μl of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000 × g.
5. Store the plasmid at -20 °C.

The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- DNA sequencing

E. coli strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5α and TOP10F".

Manufactured By Sino Biological Inc., FOR RESEARCH USE ONLY. NOT FOR USE IN HUMANS.

Vector Information
The pGEM-T vector is a high-efficiency TA cloning vector which contains multiple cloning sites as shown below. The pGEM-T vector is 3.0kb in size and contains the ampicillin resistance gene for selection. The coding sequence was inserted by TA cloning.
