Human BMPR-II ORF mammalian expression plasmid, N-Myc tag

Catalog Number: HG10551-NM

General Information
Gene: bone morphogenetic protein receptor, type I (serine/threonine kinase)
Official Symbol: BMPR2
Synonym: BMR2, PPH1, BMPR3, BRK-3, T-ALK, BMPR-II, FLJ41585, FLJ76945
Source: Human
cDNA Size: 3117bp
RefSeq: NM_001204.6
Plasmid: pCMV3-Myc-BMPR2

Description
Lot: Please refer to the label on the tube
Sequence Description:
Identical with the Gene Bank Ref. ID sequence except for the point mutations: 2826G/A not causing the amino acid variation.
Restriction site: HindIII + NotI (6kb + 3.13kb)
Vector: pCMV3-SP-N-Myc
Shipping carrier:
Each tube contains approximately 10 μg of lyophilized plasmid.

Storage:
The lyophilized plasmid can be stored at ambient temperature for three months.

Quality control:
The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

Sequencing primer list:

<table>
<thead>
<tr>

<tr>
<td>ReverseBGH</td>
<td>5’ TAGAAGGGCAAGTGGG 3’</td>
</tr>
</tbody>
</table>

The plasmid is ready for:
- Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- DNA sequencing

E. coli strains for transformation (recommended but not limited)
Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5α and TOP10F’.

Plasmid Resuspension protocol
1. Centrifuge at 5,000 × g for 5 min.
2. Carefully open the tube and add 100 μl of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000 × g.
5. Store the plasmid at -20 ℃.

pCMV3-F and pcDNA3-R are designed by Sino Biological Inc.
Customers can order the primer pair from any oligonucleotide supplier.
Human BMPR-II ORF mammalian expression plasmid, N-Myc tag

Catalog Number: HG10551-NM

Vector Information

All of the pCMV vectors are designed for high-level stable and transient expression in mammalian hosts. High-level stable and non-replicative transient expression can be carried out in most mammalian cells. The vectors contain the following elements:

- Human enhanced cytomegalovirus immediate-early (CMV) promoter for high-level expression in a wide range of mammalian cells.
- Hygromycin resistance gene for selection of mammalian cell lines.
- A Kozak consensus sequence to enhance mammalian expression.

Physical Map of Plasmid:

```
Vector Name  pCMV3-SP-N-Myc
Vector Size  6149bp
Vector Type  Mammalian Expression Vector
Expression Method  Constitutive, Stable / Transient
Promoter  CMV
Antibiotic Resistance  Kanamycin
Selection in Mammalian Cells  Hygromycin
Protein Tag  Myc
```
**pCMV3-SP-N-Myc** (suitable for secretary and membrane protein expression)

**Schematic of pCMV3-SP-N-Myc Multiple Cloning Sites**

pCMV3-SP-N-Myc is recommended for constructing the N-Myc tag secretary and membrane proteins expression vector which containing a naïve signal peptide. An universal signal peptide is used to instead the naïve signal peptide.
