Human PLAU / UPA ORF mammalian expression plasmid, N-Myc tag

Catalog Number:    HG10815-NM

General Information

Gene :        plasminogen activator, urokinase
Official Symbol :      PLAU
Synonym :        ATf, UPA, URK, u-PA, UROKINase, PLAU
Source :        Human
cDNA Size:      1296bp
RefSeq :        NM_002658.3
Plasmid:        pCMV3-Myc-PLAU

Description

Lot : Please refer to the label on the tube
Sequence Description :
Identical with the Gene Bank Ref. ID sequence.
Restriction site:          KpnI + XbaI (6kb + 1.33kb)
Vector :        pCMV3-SP-N-Myc

Shipping carrier :
Each tube contains approximately 10 μg of lyophilized plasmid.

Storage :
The lyophilized plasmid can be stored at ambient temperature for three months.

Quality control :
The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

Sequencing primer list :

- pCMV3-F:    5’ CAGGTGTCCACTCCAGGTCAAG 3’
- pCDNA3-R:    5’ GGCAACTAGAAGGCACAGTCGAGG 3’

Or

- Forward T7 :    5’ TAATACGACTACTATAGGG 3’
- ReverseBGH :    5’ TAGAAGGCACAGTCGAGG 3’

Plasmid Resuspension protocol

1. Centrifuge at 5,000 × g for 5 min.
2. Carefully open the tube and add 100 μl of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000 × g.
5. Store the plasmid at -20 °C.

The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- DNA sequencing

E.coli strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5α and TOP10F’.

pCMV3-F and pCDNA3-R are designed by Sino Biological Inc. Customers can order the primer pair from any oligonucleotide supplier.
Vector Information

All of the pCMV vectors are designed for high-level stable and transient expression in mammalian hosts. High-level stable and non-replicative transient expression can be carried out in most mammalian cells. The vectors contain the following elements:

- Human enhanced cytomegalovirus immediate-early (CMV) promoter for high-level expression in a wide range of mammalian cells.
- Hygromycin resistance gene for selection of mammalian cell lines.
- A Kozak consensus sequence to enhance mammalian expression.

**Physical Map of Plasmid**

```
Kan(R)   CMV promoter
or  enhancer   T7 primer
      KpnI  Signal Peptide
      XbaI  N-Myc
      XbaI  linker
      ORF
Hygro(R)  SV40 early promoter
XbaI  BGH reverse primer
```
pCMV3-SP-N-Myc (suitable for secretary and membrane protein expression)

Physical Map

Comments for pCMV3-SP-N-Myc:
- CMV promoter: bases 250-837
- enhancer: bases 838-1445
- SV40 early promoter: bases 2390-2759
- Hygromycin ORF: bases 2777-3802
- pUC origin: bases 4445-5118
- Kanamycin ORF: bases 5192-6007

Schematic of pCMV3-SP-N-Myc Multiple Cloning Sites

pCMV3-SP-N-Myc is recommended for constructing the N-Myc tag secretary and membrane proteins expression vector which containing a naïve signal peptide. An universal signal peptide is used to instead the naïve signal peptide.
