Rat Angiotensin Converting Enzyme 1 Gene
ORF cDNA clone in cloning vector

Catalog Number: RG80406-G

General Information
Gene: angiotensin I converting enzyme (peptidyl-dipeptidase A) 1
Official Symbol: ACE
Synonym: ACE
Source: Rat
cDNA Size: 3942bp
RefSeq: NM_012544.1
Plasmid: pGEM-ratACE

Description
Lot: Please refer to the label on the tube
Sequence Description:
Identical with the Gene Bank Ref. ID sequence except for the point mutations: 2649T/C, 2940G/A not causing the amino acid variation; 620A/G (L207R).
Vector: pGEM-T
Quality control:
The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.
Sequencing primer list:

| M13-47       | 5’ GCCAGGTTTCCAGTCACGAC 3’ |
| RV-M         | 5’ GAGCGGATAACATTTACACAGG 3’ |

Other M13 primers can also be used as sequencing primers.

Plasmid Resuspension protocol
1. Centrifuge at 5,000 × g for 5 min.
2. Carefully open the tube and add 100 μl of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000 × g.
5. Store the plasmid at -20 °C.

The plasmid is ready for:
• Restriction enzyme digestion
• PCR amplification
• E. coli transformation
• DNA sequencing

E. coli strains for transformation (recommended but not limited)
Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5α and TOP10F°.
Vector Information

The pGEM-T vector is a high-efficiency TA cloning vector which contains multiple cloning sites as shown below. The pGEM-T vector is 3.0kb in size and contains the ampicillin resistance gene for selection. The coding sequence was inserted by TA cloning.
