# General Information

**Gene:** H9N2 (A/Guinea fowl/Hong Kong/WF10/99) HA

**Official Symbol:** HA

**Synonym:** HA1, Hemagglutinin

**Source:** Influenza A virus

**cDNA Size:** 1683

## Description

**Lot:** Please refer to the label on the tube

**Sequence Description:**

ORF Clone of Influenza A H9N2 (A/Guinea fowl/Hong Kong/WF10/99) HA DNA. This cDNA clone has gone through customized codon optimization in order to obtain high level of protein expression in particular cell lines. Therefore, although the translated amino acid sequence is identical to the amino sequence on Gene Bank, the DNA sequence is different from that on Gene Bank.

**Vector:**

Vector 3. Restriction site: KpnI + XbaI

**Shipping carrier:**

Each tube contains approximately 10 μg of lyophilized plasmid.

**Storage:**

The lyophilized plasmid can be stored at ambient temperature for three months.

**Quality control:**

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

**Sequencing primer list:**

| pcDNA3-L | 5’ CTAGAGAACCCACTGCTTACTG GC 3’ |
| pcDNA3-R | 5’ GGCAACTAGAAGGCACAGTCGAGG 3’ |

Or

| Forward T7 | 5’ TAATACGACTCACTATAGGG 3’ |
| Reverse BGH | 5’ TAGAAGGACACAGTCGAGG 3’ |

*pcDNA3-L and pcDNA3-R are designed by Sino Biological Inc. Customers can order the primer pair from any oligonucleotide supplier.*

---

# Plasmid Resuspension protocol

1. Centrifuge at 5,000 × g for 5 min.
2. Carefully open the tube and add 100 μl of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000 × g.
5. Store the plasmid at -20 °C.

The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- *E. coli* transformation
- DNA sequencing

*E. coli* strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5α and TOP10F".
Vector Information
The Vector 3 is designed for high-level stable and transient expression in mammalian hosts. The vectors contain the following elements:
• Human cytomegalovirus immediate-early (CMV) promoter for high-level expression in a wide range of mammalian cells.
• Neomycin resistance gene for selection of mammalian cell lines.
• Multiple cloning sites to facilitate cloning.

Physical Map of Vector 3:

* Please refer to http://www.sinobiological.com/Vector-3-a-1637.html for the vector sequence.
